RE: Atlas-14 Modeling Update

Background

This agenda item is reserved for staff to provide an update on the current Atlas-14 XP-SWMM update project and present next steps.

Attached is the initial scope of work for the watershed-wide flood risk assessment/vulnerability and opportunity identification analysis (dated February 12, 2020) which included a three-phased approach from updating the model (current effort), assessing flood risk vulnerability and a watershed-wide resiliency assessment.

Also attached is an updated version of the planning-level work plan for Phases 2 and 3 of the Atlas 14 flood risk management work due to some of the complexities of working with such a large-scale watershed-wide model.
