This guide references rule

3.4.3

Wetland Buffers for Existing Single Family Home Plats

When should you use this page?

1. Your project requires a wetland buffer and
2. Your project is on an existing single family home property parcel

What should I know?

1. When a wetland buffer is required on an existing single family home parcel, the minimum width is 10 feet and average width is 20 feet. This is addressed in rule subsection 3.4.3.
2. Follow rule subsection 3.4 and 3.4.3. Guidance document titled *Wetland Buffers Guidance* may be helpful, knowing the width requirements addressed above. It is available at <https://www.ninemilecreek.org/permitting-guidance>
